adventure

Explorer: crafted for adventure

The Explorer is a lightweight sports performance wing aimed at seasoned XC pilots who want to fly a wing that's comfortable, responsive and performant.

Comfortable yet responsive

The handling of the Explorer has an alluring balance of smoothness and lightness. The wing is supremely well co-ordinated. It's damped and forgiving in pitch, yet the precision in the turn makes it a first class climber in thermals. Take-off and landing couldn't be simpler and the wing has an uncanny ability to seek out the best cores.

Performant

The Explorer is also made for comfortable high speed gliding during cross country flying. Direct C-riser control works very well and the lack of unnecessary C handles keeps everything simple and lightweight.

Lightweight

Naturally, the Explorer is light, at under 4kg for the M size. In fact, it's one of the lightest wings in its category, as a result of optimisation of the internal structure and the careful selection of canopy and line materials. The wide range of sizes and extended weight range offers flexibility in sizing choice according to your preferred wing loading.

Technical specification

Size	XXS	XS	S	M	L
Flat surface area (m ²)	20.1	21.6	23.6	25.5	27.6
